### 10.4. SEPA error message

login0.directo.ee says

File was exported but some rows were skipped either because they did not aggregate or had negative amount. Rows are aggregated when the following columns (indicated by green) have the same content (or not filled): Text, Description, Ref, Bank Account, Bank Cur, Date.

Ref. number visibility can be set under fine tuning (hammer). Change rows when needed and export again.

This error message occurs when you want to send purchase invoices to a bank, but some purchase invoices have a different supplier name. In this case, purchase invoices with a different suppliers name will not be summarized.

It is allowed to send credit invoices to bank with purchase invoices. One supplier purchase invoices are summed up, if the supplier name is written in the same way. Purchase invoices with reference number will not be summarized.

### 10.5. Error message when importing payment to the bank - comment too long

If too many purchase invoices are paid together, the purchase invoice numbers will not fit in the comment field. Also, the payee does not know which purchase invoices have been paid. Xml fail adds all one supplier purchase invoices rows together and purchase invoice numbers are written to the comment field when importing one supplier purchase invoices to the bank. Bank issues a warning that comment is too long, if too many purchase invoices are paid together and reference numbers are not in use.

Possible solutions:

- use fine-tuning **Export does not join same suppliers payments**
- create multiple different payments with less purchase invoices
- use reference numbers
- send payment report to the supplier **Purchases - Reports - Payments**

### 10.6. Purchase invoice number added to the transaction row

## 10.9. Payments - own right does not work

User group **own right** does not work when making payment. If it is necessary to give the user the rights to see only limited payments and the right to see only certain bank accounts, it is possible to

- Use the **user group extended right**
- Use the **limited right**
  - Make a separate payment modes for each bank account.
  - Rights can be limited in visibility rights.
  - Add the right to see limited payment rights under the user or user group rights.

## 10.10 Payment extended right

- The user sees only payments where an object, indicated on personnel card, is marked in the header
- User group rights have document = payment marked extended right

If the user group has the Payment **Extended** right, the user can only see payments with the object on the personnel card.

If the right is extended, but the object is not marked on the user's personnel card, then it behaves like an "All" right and sees all payments. If you add an object to the user, only payments with this object in the header will be visible.

## 11. Examples of system settings

### 11.1. System setting - Finance transactions from ledgers in rows

- **Finance transactions from ledgers in rows** - affects receipt, payment and expense due entry lines. Options:  
no - rows with one account are summed to one row in the related finance transaction (if the

document rows do not have different objects or projects).

debt part - money flow is with one transaction row, the receipts/payments of customers/suppliers are in a separate row, as on the receipt/payment document, i.e. there is no rows consolidation on the debt side. Objects and projects are considered.

asset part too - money flow and customers/suppliers receipts/payments are in a separate rows as on financial transaction.

like payment file - the flow of money is the aggregate by customer/supplier, and on the ledger side, the invoice is reflected line by line, the invoice number is at each row beginning.

## 12. Prepayments via PreID (NEW PAYMENT DOCUMENT)

These payment rows, which do not refer to any specific purchase invoice, affect the prepayment balance in the purchase ledger and the customers prepayment balance in the balance sheet. Directo generates a unique prepayment ID or PreID value for each payment row with a positive prepayment sum, which can later be used to link the purchase invoice to a specific prepayment row. In the prepayment row can use the account to which the prepayment can be entered in the balance sheet - if the account is left empty, it will be taken either from the supplier's card in the payment row or if no account has been specified in the **PP account** field on the supplier's card, then from the system setting Supplier prepayments. Prepayment row object and project are used to create the transaction.

### 12.1. PreID on payment document

A double-click inside any of the Selected column fields will attempt to match that specific prepayment with purchase invoice prepayment uncovered sum.

- the purchase invoice is paid in the same currency as the prepayment **Bank cur**
- when making purchase invoice payment mark the same bank exchange rate in which the prepayment was made **Bank rate**.

If the prepayment is in the same currency as purchase invoice

- when using prepayment mark the prepayment with the same exchange rate as payment **Bank rate**
- the purchase invoice is paid in the same currency as the prepayment **Bank cur**
- when making purchase invoice payment mark the same exchange rate in which the prepayment was made **Bank rate**.
- use the netting payment as payment mode, which type is = equal
- exchange rates are calculated on the financial transaction

### 12.5. Previous prepayments

All the earlier suppliers prepayments are without a prepayment number and will be used without a prepayment number. The PreID functionality only works on a new Payment document.

#### 12.5.1 How to see correctly the prepayments in the Supplier prepayments report

- If there are few prepayments, open previous prepayments, press save (e.g. add a dot to the comment field to create a save button) and confirm again. Start by over confirming the original prepayments, then move to the used prepayment documents.
- If there are lots of prepayments, use the OLD Payment document to link the old prepayments.
