PDF Printout for an External System	3
Configuration	3

PDF Printout for an External System

Directo's capability for requesting a printout PDF from an external system such as a WMS, webshop, etc. The external system requests a specific printout that has been designed in Directo and receives it in PDF format.

NB! Requesting a printout requires a Directo concurrent user license!

Configuration

To provide an external system with the ability to request a printout:

1. Create a user with a password and user rights to query the given document and printout, and the user must not be prompted for a location at login

2. The address for accessing the printout. Open the specific printout
3. The URL of the opened printout window contains the necessary data:
 1. Base URL
 2. Printout ID
 3. Module identifier, i.e. document type
 4. The number of the document to be printed

Based on this data, the external system can request a PDF printout from Directo by making a POST request to

```
https://login.directo.ee/{base_name}/keeks.asp?yld_print.asp?mida=xsl&row={Printout_ID}&moodul={module_name}&number={document_number}&aspdf=1&print=yes
```

posting the username and password in the Body as x-www-form-urlencoded.

Example of how to make a request in Postman 1. Parameter settings 2. Username and password posting settings **NB! Enter the correct base name**

You can download the Postman example here [pdf_print4extrnalparty.postman_collection.json](#)

curl example

```
curl --location --request POST
'https://login.directo.ee/ocra_xxx/keeks.asp?yld_print.asp?mida=xsl&row=2830
&moodul=sissetulek&number=200014&aspdf=1&print=yes' \
--header 'Content-Type: application/x-www-form-urlencoded' \
--header 'Cookie: chuser=xxx; cookie=x;
ASPSESSIONIDAGSUSCRA=DOENMEFCA0EALKDIHFABEEEA;
ASPSESSIONIDQGFRAQA=CLDBENECEHMGFEPEAMFNFBFN' \
--data-urlencode 'nimi=xxx' \
--data-urlencode 'sala=xxx'
```
