Job Families 3
Adding a job family 3

Job Families

With job families, you group positions with similar content, for example all IT development or HR positions. When the positions are divided into job families, you can compare and analyse wages and positions by job family – for example check whether the wages of positions in the same job family are consistent with each other.

You can find the job family register in the menu `Settings → Personnel Settings →` **`Job Families`**.

Adding a job family

1. Click **Add new** in the register.
2. Fill in the fields **Code** and **Name**.
3. Click **Save**.

Code - the code of the job family, for example `IKT_BACKEND` or `HR_Rec`.
Name - the name of the job family, for example `IKT Backend` or `HR recruitment`.
