POSTCP Card payment

Nets Cloud@Connect for card payments

First things first - open up Settings and search for “Nets”. Fill out the fields with the information provided by your Nets contact.

The screenshot shows the 'Directo settings' interface. At the top, there's a search bar with 'nets' entered. Below the search bar, a sidebar on the left lists various settings categories: System settings, Common Settings, Finance Settings, Personnel Settings, Stock Settings, Sale settings, Personal settings, and Print layouts. The main content area displays 'Search results "nets":'. Under this, there's a 'Menu ()' section and a 'System settings (2)' section. The 'System settings (2)' section contains two input fields: 'Nets Cloud@Connect username' and 'Nets Cloud@Connect password', each with a help icon. A 'Save' button is located below these fields.

Under “Locations” in settings create a new location for every Nets terminal you plan to use.

- Open up a location/Create a new location and make sure “Card payment” has “Nets Cloud@Connect” selected.
- In the “Nets Cloud@Connect terminal ID” field add the Nets terminal ID found on the physical terminal itself (check your terminals user manual for the exact location). One location has to match with 1 terminal.

Printed on 2024/04/25 23:16

Next, assign the newly created location to a user (Settings → Users → <chosen user> → Locations).

The setup is now complete. All payment requests done through Directo should be going to Nets cloud servers.

Empifis

Using Chrome and Empifis

For LT/LV Empifis solution You need to download Directo DLL agent (found here <https://login.directo.ee/logos/install/dllloader/directo-dll-agent.exe>). This application will act as an intermediary between Directo and Empifis hardware.
