

Sisukord

- Technical requirements** 3
- Input principles* 3
- Custom extensions (aftersave)* 3

Technical requirements

- Format **XML**, encoding **UTF-8**, transport **HTTPS**, access **POST**
- The interface is **passive**; the response is synchronous XML
- Document numbers are integer (max 2147483647)
- **The whole XML post size limit is 19 MB**; attachments are unlimited in count but must all fit within it.

Input principles

- Input **creates** a new document or **updates** an existing one (matched by external key / number).
- **To modify**, the component must have `xd_update=1`; on update, post the **whole document** (it is overwritten).
- **A confirmed document cannot be modified** - response `Type=14` (confirmed or has linked documents). Exception: `xd_updateconfirmed=1` allows modifying a confirmed document for **order, invoice, purchaseorder, stockreceipt**.
- **Exception: a delivery document cannot be modified.**
- **Partial modification** applies only to partner master data: `xd_customer_update=1 / xd_supplier_update=1` updates an existing customer/supplier **name, email and phone** (response 30 Updated). Transaction documents cannot be partially modified.
- Behaviour is controlled by [transport parameters](#); some inputs also support [default value setup](#).

Custom extensions (aftersave)

An exception, not default functionality. If needed, a **custom after-save processing** step can be added to the interface (by agreement with Directo) - extra logic that runs after the document is saved. Unlike transport parameters, this is not a standard setting but a case-by-case extension.
