Transport parameters 3

Transport parameters

Input component behaviour is controlled by transport parameters. **Component-specific**; configured on the token, **not sent** in xml\data. Each input's table is on the component page.

- Empty/0 values need not be set. PARAMETER 2 = document type.
- Common: xd_confirm, xd_update, xd_autocustomer, xd_stock, xd_object, xd_salesman.

Default values (ALT . FROM) are a separate topic – shown per field in the component page Description column; setup: [Mandatory fields](#).
