# XML Direct

## Introduction

Introduction **XML Direct** is a standardized integration interface designed to provide seamless, structured access to business-critical data through a single unified endpoint. The interface is modular and configurable, allowing organizations to select only the components relevant to their needs.

All components within the XML Direct interface follow a **fixed field structure**, ensuring a **uniform data format** across all Directo customer environments. This common structure enables faster implementation and easier maintenance, as no customer-specific development is required.

## Key Features

- **Modular Architecture:** Components (e.g., customers, invoices, inventory) can be enabled individually according to specific integration requirements.
- **Uniform Data Format:** Field definitions and data structure are standardized across all implementations, minimizing inconsistencies.
- **Shared Development Model:** Enhancements and updates are applied centrally and benefit all users, with no need for client-specific customization.
- **Secure Access via API Keys:**
  - Multiple API keys can be generated and assigned to different partners.
  - Each API key can be restricted to access only specific components.
  - This provides enhanced **flexibility** and **data security**.

## Implementation Considerations

Prior to implementation, it is essential to:

- Define the **scope of integration**.
- Identify the **required components**.
- Ensure the technical partner has access to the necessary documentation and authentication details.

Once agreed upon, activating the XML Direct interface is straightforward and does not require any Directo-side development or configuration.

# API Key

To find the interface XML key and provide it to the developer:

1. Log in to Directo with a user who has SUPER rights
2. Since there can be multiple API keys, you need to open the employee card for whom the key has been created. For example, open the employee card 'XML'

3. Go to the Admin tab

4. Go to the XML interfaces section

5. On the line of the required interface, press the button  to see the key

## Access to the Interface (URL)

Access to the interface is via the POST method, form/urlencoded, to the following URL:

[https://login.directo.ee/xmlcore/cap\\_xml\\_direct/xmlcore.asp](https://login.directo.ee/xmlcore/cap_xml_direct/xmlcore.asp)

A token must be used for access (see the API Key obtained in the previous chapter). The token replaces the older interface types' appkey and database name all at once. The token must be sent via the POST method in the TOKEN variable (similar to submitting an HTML form) to the given URL to get a result. In case of an incorrect or improperly sent token, the response is `<result type=„5“ desc=„Unauthorized“/>`. In case token is missing the response is `<err>token required</err>`.

### curl example

```
curl --location
'https://login.directo.ee/xmlcore/cap_xml_direct/xmlcore.asp' \
--header 'Content-Type: application/x-www-form-urlencoded' \
--data-urlencode 'token=.....' \
--data-urlencode 'get=1' \
--data-urlencode 'what=xxxxx' \
--data-urlencode 'ts=xx.xx.xxxx'
```

## Price

The price depends on the selected components.

The output of deleted documents is included in the price and is free of charge.

The price for an additional API key is €0 per month.

If multiple API keys have the same components, the fee for them is charged only once.

### Example:

- API key A contains outputs: customer and item
- API key B contains outputs: customer and order

→ In this case, the fee is only for three unique components: customer, item, and order.

## Testing

XML Direct interface testing link [https://login.directo.ee/xmlcore/cap\\_xml\\_direct/webupload.html](https://login.directo.ee/xmlcore/cap_xml_direct/webupload.html)

## General

- Output interfaces show all records, and restrictions can be made with query filters!
- The functionality of input interfaces can be controlled with TRANSPORT PARAMETERS - please read more about the Transport Parameters of the input component. By default, a transport parameter with an empty or '0' value is not required.
- Some inputs also support setting default values.

## Components

Selectable components

Component (what)	Input \ (put=1)	Output \ (get=1)
Orders (order)	x	x
Invoices (invoice )	x	x
Receipts (receipt)	x	x
Customers (customer)	x	x
Suppliers (supplier)	x	x
Items (item)	x	x
Items:Stock Limits (itemstocklimit)		x
Items:Packages (itempackage)		x
Items:Related Items (itemreliitem)		x
Item classes (itemclass)		x
Stock level (stocklevel)		x
Stock level with serial numbers (stocklevel_sn)		x

Component (what)	Input \ (put=1)	Output \ (get=1)
Stock level with variants (stocklevel_variant)		X
Price formula rows (priceformularow)		X
Purchase invoices (purchase)	X	X
Financial transactions (transaction)	X	X
Resources (resource)	X	X
Deleted documents		X

## Inputs

### Invoices

### Invoice transport parameters

TYPE	CODE	PARAMETER 1	PARAMETER 2	EXPLANATION
XML	xd_changestock	0	INVOICE	Stock changing invoice (Param.1 =1 means change stock)
XML	xd_autocustomer_autocode	0	INVOICE	When creating a related customer, the code is created in the interface, a unique email is required and system settings for customer codes are necessary
XML	xd_update	1	INVOICE	Allow document update if there are no related documents
XML	xd_customer_update	0	INVOICE	Partial update of customer data (name, email, phone) or according to spec
XML	xd_object	TEST_OBJECT	INVOICE	Default object if not sent
XML	xd_salesman	XML	INVOICE	Default salesperson
XML	xd_stock	PL	INVOICE	Default stock if not sent
XML	xd_confirm	0	INVOICE	Automatic document confirmation, can also be controlled with the „confirm“ XML field
XML	xd_posinvoice	0	INVOICE	1 = POS invoice

TYPE	CODE	PARAMETER 1	PARAMETER 2	EXPLANATION
XML	xd_autocustomer	0	INVOICE	Automatic creation of a related customer if the customer code does not exist

To configure default invoice values, read more [here](#)

## Orders

what=order [Schema](#)
