JPK VAT declaration

1. Data preparation.

If you want to generate JPK VAT report for polish government, you have to:

- In master settings fill your company legal name (PelnaNazwa), your company VAT no (NIP) and your company e-mail (Email)
- In customers and suppliers cards put VAT code (NrKontrahenta), company name (NazwaKontrahenta) and company address (AdresKontrahenta);
- Put JPK VAT classificators in finance settings → VAT codes.

JPK VAT classificators

VAT classificator should be filled in finance settings → VAT codes.

For every VAT code fill up VAT code datafields content . For example 23% sales VAT code will have two classificators K_19, K_20 (see pic.)

The screenshot shows the 'VAT codes' settings in the software. On the left is a sidebar menu with options: Payment modes, VAT codes, VAT countries, VAT declaration, Personnel Settings, Stock Settings, Sale settings, Personal settings, and Print layouts. The main area displays settings for 'DOCTransportPrefers' (Yes), 'PURCHASE VAT PROPORTION' (0), and 'PL VAT COST ACCOUNT'. Below these is a table titled 'DataFields' which is highlighted with a red rectangle. The table has two columns: 'Type' and 'Content'.

Type	Content
PL NET for SALES	K_19
PL VAT for SALES	K_20
PL NET for PURCHASE	
PL VAT for PURCHASE	

There should be different VAT codes for sales and purchases, except case when it should be in both sides. For example Service from EU will have 4 classificators: two for sales and two for purchase (see pic.), that means if such code will be used in purchase invoice then this invoice will appear also in sales side and vice versa.

Object levels	ost_km_objekt	<input type="text"/>
Payment modes	FISCAL BLOCK	<input type="text"/>
VAT codes	DOC.TRANSPORT PREFERS	Yes ▾
VAT countries	PURCHASE VAT PROPORTION	0
VAT declaration	PL VAT COST ACCOUNT	<input type="text"/>

DataFields

Type	Content
PL NET for SALES ▾	K_29
PL VAT for SALES ▾	K_30
PL NET for PURCHASE ▾	K_45
PL VAT for PURCHASE ▾	K_46

If there is reverse VAT, then in datafield parameter additionally should be added A letter (see pic)

Payment modes	FISCAL BLOCK	<input type="text"/>
VAT codes	DOC.TRANSPORT PREFERS	Yes ▾
VAT countries	PURCHASE VAT PROPORTION	0
VAT declaration	PL VAT COST ACCOUNT	<input type="text"/>

DataFields

Type	Content	Parameter
PL NET for SALES ▾	K_29	
PL VAT for SALES ▾	K_30	A
PL NET for PURCHASE ▾	K_45	
PL VAT for PURCHASE ▾	K_46	A

Dates in invoices

In sales invoices are two important date fields:

1.Date - real date when invoice was created;

1. Sent - date when invoice was sent.

First date goes to report as „DataSprzedazy“ and other as „DataWystawienia“.

In purchase invoices there are: 1. Invoice date – date when invoice was entered to the system; 2. VAT date – date when VAT is calculated; 3. Issue date - date when invoice was created. Invoice date goes to report as „DataWplywu” and Issue date goes as „DataZakupu”. VAT date is used for filtering invoices for report, if it is not filled then invoice date is used instead.

2. Generating JPK report.

To use report go: Finance → Reports → JPK VAT report.

In report you can use filters:

- From, Until - choose period for which you generate report;
- You can choose particular customer, customer class, supplier, supplier class, VAT codes, range.

If there is need to exclude something then use exclamation mark. For example if you do not want that to report go invoices which has 0 and 1 VAT codes, then add to VAT code filter **!0,1**

In report you can choose excel file format or xml. Add filters you need, choose file format and press report button, you will get report in desired file format.
